First 'One Rate' North American GSM and CDMA Service Plans

Flat rate pricing for US, Canada and Mexico with no roaming or international costs within North America

Cost effective solution for mobile applications throughout North America

Superior, reliable network coverage and seamless support across North America

On-demand management via PRISM™, the industry's leading self-management portal

Static IP and messaging options available

KORE understands the demands and complexities of M2M solutions and that business is becoming global. So we developed GSM and CDMA 'One Rate' Plans for the U.S., Canada and Mexico, delivering cost-effective solutions for businesses requiring reliable wireless data communications for tracking vehicles, assets and personnel across the borders of North America.

The KORE 'One Rate' Plans drive down the cost of embedded wireless data communications, enabling application service providers to offer more powerful M2M applications at lower price points. Send messages from Los Angeles to Vancouver or from Chicago to Mexico City at one flat rate without additional roaming or international charges.

Frequent cross-border applications including asset or vehicle tracking, intermodal solutions, supply chain management, and BHPH asset management will benefit greatly from the KORE 'One Rate' Plans.

Increase your bottom line with the most cost effective network service for your application, on the most robust wireless networks designed for your M2M business.

Why KORE Telematics?

As the largest specialized wireless network provider focused exclusively on the machine-to-machine (M2M) market, KORE Telematics delivers standards-based GSM and CDMA network services through Direct Connect agreements with Tier 1 operator partners.

Powering over 550 application, solution and technology partners, KORE enables complete solutions for a wide range of M2M, enterprise and government needs, including asset tracking, telematics, payment processing, remote control, security, sensors, video and dozens of other commercial and government applications.

You get more than just connectivity—you benefit from specialized capabilities—comprehensive monitoring, alarm & control features via the KORE PRISM™ Gateway—secure web services for real-time management, or API's for enterprise integration supporting:

- Real-time activation in batch or single mode
- Threshold management for cost control
- On Line usage and billing
- APIs and M2M Integration toolset
- Active usage monitoring and reporting

KORE is the wireless services innovator: the first to provide web-based, real-time control through our PRISM™ portal, the first to deliver pay-for-use M2M services and our innovation continues, with more new services designed to deliver bottom-line support.
